Over the past couple of decades, video games has been rising in popularity among youths, and even adults throughout the world.

In this project, a data analysis will be done on the sales of video games to evaluate the sales of video games throughout different countries.

# Problem Statement

- Which genres are more popular? Do they differ in each region?
- Which video game platforms are more popular?
- Which specific games are most popular?
- How can video gaming companies boost their sales using the data analyzed?

# Data Preparation

- The dataset used is from Kaggle - <https://www.kaggle.com/datasets/gregorut/videogamesales>
- As mentioned by the author, the dataset was scrapped from the website [www.vgchartz.com](http://www.vgchartz.com), using the Python script BeautifulSoup.
- The fields of the dataset include:
  - Rank - Ranking of overall sales
  - Name - The games name
  - Platform - Platform of the games release (i.e. PC,PS4, etc.)
  - Year - Year of the game's release
  - Genre - Genre of the game
  - Publisher - Publisher of the game
  - NA\_Sales - Sales in North America (in millions)
  - EU\_Sales - Sales in Europe (in millions)
  - JP\_Sales - Sales in Japan (in millions)
  - Other\_Sales - Sales in the rest of the world (in millions)
  - Global\_Sales - Total worldwide sales

# Data Processing (SQL Overview)

- As this is a large dataset (16,327 rows), we will mainly be using SQL to process the data (mySQL).

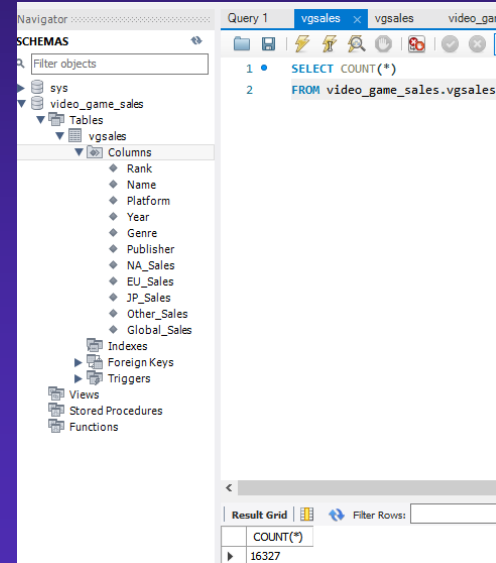

The screenshot shows a database management tool interface. On the left, a 'SCHEMAS' pane shows a tree view with 'sys', 'video\_game\_sales', and 'vgsales'. The 'vgsales' table is selected. The main pane shows a query editor with the following SQL:

```
1 SELECT *
2 FROM video_game_sales.vgsales;
```

Below the query editor, a 'Result Grid' shows the first 25 rows of the 'vgsales' table. The columns are: Rank, Name, Platform, Year, Genre, Publisher, NA\_Sales, EU\_Sales, JP\_Sales, Other\_Sales, and Global\_Sales. The data is sorted by Rank in ascending order.

Rank	Name	Platform	Year	Genre	Publisher	NA_Sales	EU_Sales	JP_Sales	Other_Sales	Global_Sales

# Data Processing (mySQL)

- REMOVING DUPLICATES

- The following query helps to identify duplicates in the 'Name', 'Platform' and 'Year' column:

```
SELECT  
Name, COUNT(Name),  
Platform, COUNT(Platform)  
Year, COUNT(Year)
```

```
FROM  
video_game_sales.vgsales
```

```
GROUP BY  
Name,  
Platform,  
Year
```

```
HAVING  
(COUNT(Name) > 1) AND  
(COUNT(Platform) > 1)
```

x x x x x  
x x x x x  
x x x x x  
x x x x x  
x x x x x

From the results, we can see that 'Madden NFL 13' has a duplicate:

Name	COUNT(Name)	Platform	Year	COUNT(Year)
Madden NFL 13	2	PS3	2	2

# Data Processing (mySQL)

- REMOVING DUPLICATES

- Upon further inspection, we can see that row 16130 is the duplicate row;

# Insights & Recommendations

× × × × ×  
× × × × ×

# Insights & Recommendations

- **GENRE:**

- For both NA and EU, we notice a similar trend in the top few favorite gaming genres, such as Action, Sports, Shooter etc. However, for Japan, a distinct difference in the top genre is the Role-Playing category.
- Using this data, video gaming companies in Japan could perhaps focus on producing games under the role-playing category (MMORPGs – Massive Multiplayer Online Role-Playing Games, or MMOs) such as Genshin Impact, Maplestory etc., and vice versa for the other regions.

# Insights & Recommendations

- **PLATFORMS:**

- The top gaming platform is the PS2, followed by XBOX360, PS3 & Wii. A possible reason for the PS2 being top could be that it has been around for a very long time, and many users have games which only the PS2 can play. Coupled with the fact that the new Playstation 5 is quite expensive, most users would prefer staying with their PS2.
- A way to boost video game sales is to continue producing games which are playable and supported by the new PlayStations, as well as the older ones such as PS2.
- However, if the aim is to boost the platform sales (such as PS5), the direction to look towards is to produce “Limited Edition” games that only the latest platforms can support. This might in turn boost the sales of the latest available gaming platforms.

# Insights & Recommendations

- **SPECIFIC GAMES:**

- The most popular game is the Wii Sports, followed by Grand Theft Auto V and Super Mario Bros.
- The Wii Sports is a category of its own which contains the different sports games playable by Wii, which could be why it has the most sales out of the other games. However, gaming companies could leverage on this fact by producing and creating more Wii Sports games which are even more interactive physically, which is one of the unique attribute of Wii Sports that attracts potential video gamers.
- On the other hand, Grand Theft Auto V was a highly anticipated game with its multiple successive franchise in the past. Also, Grand Theft Auto V was released on multiple platforms – which is probably the main reason for its popularity. Building on this concept, video game companies could do the same by releasing a single game on multiple platforms to boost their sales and revenue.

By transforming raw data into clean and useful data using platforms such as Excel & SQL, we can create charts and visualizations out of it using Tableau. With these visualizations, we can better understand the data presented to us, and make insightful recommendations to the relevant stakeholders, which could effectively boost their sales & revenue.
